Useful Tools For You to Build Your Online Business (part 1)  
By Nam Tran Ybarra

Last week, ( see issue2@icanyoucantoo.com)

I gave you some good resources on how to learn HTML.

This week you will learn to use some additional tools which will  
help you build your online business. As always, I am just telling you what I'm personally using and  
how it works.

So, today you can try to use this tool to help build your  
website fast and handle it easier: An HTML editor:

AceHTML 4 Freeware . If you are like me, you like things simple  
and easy (and free -) then this is the right tool for  
you. I love it when I click on the checking error and spelling ,  
it will automatic check and tell me where the error is and  
how to fix it. Really cool! Also when you type the HTML  
code you can see how it shows up on your browser.

This is so simple with AceHTML, just one click! Infact, your HTML  
page and your real page shows up the same right on one window!

You just type your HTML code and click refresh and Bam!!!!

here is your "picture". It really is a time saver !

If you are currently using Notepad , Word pad,  
Netscape composer, homestead...you will be happy with this.  
Again, this program is extremely easy to use, and it's Free!!!!

Download it here: <http://www.visicommedia.com/>

Useful Tools For You to Build Your Online Business (part 2)  
By Nam Tran Ybarra

This week we have 3 additional tools for you to build your site. You have written the HTML code, now you want to have a logo for your site. Do you see the logo I can You Can Too.com on my site? And the buttons on the left? Want to know how a seven day HTML learner made it? ( See issue2@icanyoucantoo.com)

Well, just go here: <http://www.flamingtext.com/> .  
<http://www.quickbanner.com> ,

They have a ton of stuff for you to play with.

And of course, it's free!!!!

But be careful, the graphics may load very slow depending on how large they are. A fast loading site is the key!! Remember, the net citizen is extremely impatient!. Here are my Extra Secrets Tips for you: After you have made your logo and button ect.. save them on your computer at a folder "images" ect...then use this tool to help reduce the size of your images. The fewer KB you use, the faster it will load on your site. This software is wonderful. It's name is Paint ShopPro . Download a 30 day free trial here:

[http://www.jasc.com/download\\_4.asp](http://www.jasc.com/download_4.asp) .

I also highly recommend you visit here:

<http://www.icanyoucantoo.com/cgi-bin/t/t.cgi?webtools>

They have many tools that you simply just need to cut and paste to your site from a counter to a chatroom. They have an incredible tool call "humanclick". It is a tool that I think sooner or later, every net marketer will have to have. Ok, now you go to my site <http://www.icanyoucantoo.com>, scroll down and you will see a small image called "humanclick", click on it, and now you can chat with me live!

I think it's much more convenient than ICQ! Visitors don't have to install or download anything!

And it will automatically show up "please leave a message" if I'm offline. Yes, you can "email" me much faster that way.

Have you ever seen a cool tool like that?

And of course it's Free! Wow!!
